

# KLAES WEB TRACKING

## New service for your customers

Make the progress of your orders transparent and offer your dealers and fitters a unique service! With the necessary rights, your dealers or fitters log on to your web server and see the status of an order.

They can then see exactly whether production has already started or whether their order has already been manufactured and delivered. The dealers and fitters are of course not bound to opening hours, but can check the current status of their order around the clock.
